

SHARED INSTRUCTIONS:

Use the provided image as the exact first frame and structural reference for the piano.

Preserve the number, position, shape, spacing, and repeating two-black-key/three-black-key pattern of every piano key throughout the entire video.

Create one continuous 8-second photorealistic video of a real piano keyboard viewed from a fixed, slightly angled overhead camera. The camera must not move, zoom, cut, shake, or change angle. Keep the center octave of the keyboard fully visible throughout the entire video.

Show exactly one anatomically correct right hand. The hand must remain fully visible at all times and must physically press the specified white piano keys.

Use large, clear, exaggerated hand and finger movements so that every key press is easy to observe. Before each press, lift the finger noticeably above the keyboard. Move the hand clearly toward the target key, press the key with a visible downward motion, and lift the finger fully after release. Leave a brief, visible separation between the finger and the key before the next press.

Do not use subtle tapping, tiny finger motions, sliding movements, or ambiguous contact. The hand must not hover so close to the keys that a press is difficult to distinguish. Each press and release must be visually obvious from the fixed camera angle.

Each target key must visibly travel downward when pressed and return completely to its normal raised position after release. Only the intended finger should contact the intended key unless a chord is explicitly requested. Preserve a physically correct piano keyboard throughout the video. Do not add, remove, reshape, stretch, merge, or rearrange any keys.

Generate synchronized audio directly with the video. Each visible key press must produce the matching acoustic-piano note at the exact moment the key begins moving downward. Each audible note must end naturally after the visible release. Use clean, isolated piano sound with no speech, background music, ambient sound, metronome, percussion, or extra notes.

Do not display labels, arrows, note names, captions, sheet music, highlighting, or visual effects. Do not show a second hand. Do not press any black keys. Do not press, touch, or accidentally depress any keys other than those explicitly requested.

Level 1: Singular notes

Prompt 1A: Middle C [PUT BELOW THE SHARED INSTRUCTIONS]

The hand begins resting naturally above the keyboard without pressing any key. At exactly 3.0 seconds, use one finger to press middle C, also called C4, once. Hold C4 for 0.5 seconds, then release it completely. Produce exactly one audible C4 note synchronized with the downward key movement. No other key may move and no other sound may occur.

Prompt 1B: E4 [PUT BELOW THE SHARED INSTRUCTIONS]

The hand begins resting naturally above the keyboard without pressing any key. At exactly 3.0 seconds, use one finger to press E4 once. E4 is the white key immediately to the right of D4 in the middle octave. Hold E4 for 0.5 seconds, then release it completely. Produce exactly one audible E4 note synchronized with the downward key movement. No other key may move and no other sound may occur.

Prompt 1C: G4 [PUT BELOW THE SHARED INSTRUCTIONS]

The hand begins resting naturally above the keyboard without pressing any key. At exactly 3.0 seconds, use one finger to press G4 once. Hold G4 for 0.5 seconds, then release it completely. Produce exactly one audible G4 note synchronized with the downward key movement. No other key may move and no other sound may occur.
